

Use Cases

Admin

Show Staff

This was build purely for testing and learning how to manage a database so I would say there is no much use of this in my database management system that i tried to built.

Users

This is to show all the users present and their information (Authorization) in the system. It does not show the user's password which even if it does, is well encrypted.

Update User Status

It asks the admin user for a username and authorization it wants the user to be updated to. They can only chose from {chef, admin, customer}. Other than that it wont accept any responses for Authorization

Delete Users

This is to delete any user the admin user wants. It asks for a username and if it is available in the system, it will delete it.

Chef

Pending Orders

This shows a list of pending orders and their details about who ordered it and the list of ordered items. It has a button set to complete it which then updates the list to remaining pending orders.

Food List

This shows the list of all foods registered in the system and their details.

Edit Availability

Here all the food items are shown with a button right below them to edit their availability. The ones who are available, shows a button (Set not available) and vice versa. Here the chef can set what to be shown on the menu and what not.

Add Food

It requires name of the food, description and category which can only be desi or valaiti. Then it adds it in the system with availability set to not available.

Orders

This shows all of the orders whether pending or completed. Its for history of all orders.

Customer

Menu

It shows all the available food items, where the availability is controlled by the chef.

Add Order

It allows the user to add stuff into the cart and then press complete order to send a request of their order. Which will be stored as pending and shown to the chef.

Search

Here the customer can search for all the food items, available or not that are registered in the system.

Order History

Here the customer will be shown all of its history of the orders that they did. They will only see their own order history
